FAQ's

- Q. Can I give the MCT or Omega Blend Oil directly to my pet on a spoon?**
A. Yes, most Cats & Dogs end up loving the taste of our oils, you can just let them lick it off a spoon if they are happy to do so.
- Q. I heard that Coconut oil is a saturated fat, and that it's not good for my pets?**
A. Yes Coconut Oil is a saturated fat, but like Avocado Oil, Fish Oil, and Olive Oils, Coconut Oil is one of the "Good Fats" that our bodies and our pets bodies thrive on.
MCT or Medium Chain Triglycerides, more commonly known a Medium Chain Fatty Acids (MCFAs) are essential for great health in both humans and our pets.
- Q. How young can I start my pets on MCT or Omega Blend Oil?**
A. As soon as your puppy or kitten is starting on solid foods you can start introducing MCT or Omega Blend oils into their diet, but remember only the recommended dosage.
- Q. Do I need to keep my MCT or Omega Blend oil in the fridge?**
A. You can keep the oils in the fridge, but you don't have to, although keeping them out of direct sunlight is recommended.
- Q. If I accidentally give too much oil to my pet, will it harm them?**
A. No, definitely not, at worse they may get runny stools for a day or so.
- Q. What's the best way to treat allergies, orally or topically?**
A. Both. To provide your pet with the best outcome for their allergies, provide them with a daily dose of MCT or Omega Blend Oil in their food, but as well for skin irritation, skin allergies and the like, pour some of your preferred oil into your hands and massage into skin or the particular part of their body affected.

What are MCTs & MCFAs..?

MCT or Medium Chain Triglycerides comes from Coconut Oil. All fats & oils are composed of triglycerides, but Coconut oil is composed predominately of MCTs.

When we eat Coconut Oil, our bodies break down the MCTs into individual Medium Chain Fatty Acids (MCFAs), the 3 main MCFAs are Caprylic Acid (C8), Capric Acid (C10), and Lauric Acid (C12).

“MCFAs and MCTs which come from coconut oil.”

Coconut is a nutritious food that possesses both nutritional and medicinal properties. It is a **SUPERFOOD**, a food that provides substantial health benefit beyond it's nutrient and calorie content.

Coconut and coconut oil have been viewed primarily as food for humans, what's been researched and discovered is that animals love it, and the health benefits for animals is virtually the same as it is for humans.

Animal studies demonstrate how and why coconut oil digests easier than other oils and how it is converted into energy rather than body fat.

MCFAs possess potent antimicrobial properties capable of fighting off disease causing bacteria, viruses, fungi, yeast and parasites without causing any harm to us or our pets.

MCFAs can help moderate sugar release and thus help balance blood sugar levels, thus assisting with diabetes, they possess anti-cancer properties, they provide quick and easy source of energy, they have antioxidant effect, are anti-inflammatory, and boost immune function.

Overall, daily or regular use of MCT Coconut Oil and Omega Blend Oil will improve over-all health and well-being to your pets.

COCO PET™ FOR DOGS TASTELESS Oral and Topical Supplement

Uses and Health Benefits for DOGS

- Skin Health, naturally antibacterial, antiviral, and antifungal, apply directly to cuts, wounds, burns, insect bites, can speed healing
- Gut health & Weight Loss, improves metabolic function, balancing the thyroid, improving energy
